Submission Instructions

You will submit your assignments online by uploading them to your course in Moodle. Once you log in to your course, you will find more detailed submission instructions provided by your teacher.

Go to this website to learn how to log in to Moodle:

<http://quick.adlc.ca/login>

If you have further questions about submitting your work, please contact your teacher.

Mathematics 30-3 Online

Course Review 1 Assignment

Our Pledge to You:

Enrolling in this course is another step toward an Alberta High School Diploma. Everyone at Alberta Distance Learning Centre is committed to helping students achieve their educational goals. We welcome your contact in person or by phone, fax, e-mail, voice mail, or postal mail.

Advice:

Your achievement in this course is determined by your success in the assessments of each unit. Your responses to assignments indicate your understanding of outcomes established by Alberta Education.

- Before responding to the assigned questions, read all relevant directions for the Assignment and instruction in the course materials, including the appropriate Guide for Learning and any other resources provided.
- When you encounter difficulties, re-read the directions for the Assignment and review the relevant instruction in the Guide for Learning.
- If you require further clarification, contact your Alberta Distance Learning Centre teacher for assistance.

Notice:

You have one opportunity to submit each Assignment.

- Only under exceptional circumstances will your ADLC teacher re-assess your work. Therefore, apply significant effort to each Assignment.
- If your final exam mark is vastly different from your Quiz marks, your teacher may apply discretion in determining your course mark.

Format

You are encouraged to **handwrite** your written work.

If you type your work, be sure to follow these guidelines:

- Include your full name and student file number as a document header.
- Double-space your final copy.
- Staple your printed work to this Assignment.

ADLC Plagiarism Policy (ADLC Administrative Policy 60–1)

Plagiarism is the practice of representing someone else's work or ideas as one's own. It is an academically dishonest practice and is detrimental to a student's knowledge and skill development. ADLC takes a progressive approach to plagiarism to educate and correct the behaviour.

All incidents will be documented and are subject to the consequences outlined below:

First Incident	Second Incident	Third Incident
The student is given zero scores on any work suspected of being plagiarized and given the opportunity to resubmit original work.	The student is given zero scores on any work suspected of being plagiarized and is not given the opportunity to resubmit original work. A letter is sent by the principal to parents and school facilitators outlining this administrative practice and the consequences.	The student is removed from the course in which plagiarized work is suspected and notifications are put into the ADLC Student Information System, barring future registration to the course in question. A withdrawal letter is sent by the principal to parents and school facilitators.

Important

While removal from a course is limited to the course in which the third incident has occurred, the preceding steps can occur across different courses. A student who has been found plagiarizing in Course A and held to the First Incident consequences who then plagiarizes in Course B will move to the Second Incident consequences.

Any further occurrences after the Third Incident in any other courses will result in immediate removal from that course. Ongoing occurrences may result in removal from all courses and barring of registration with ADLC.

Sharing of ADLC Work (ADLC Administrative Policy 60–4)

Plagiarism is the practice of representing someone else’s work or ideas as one’s own. It is a dishonest practice and is damaging to a student’s knowledge & skill development. Plagiarism is addressed in ADLC Administrative Policy 60-01.

The sharing of school work, especially after having been marked by ADLC, to students for the purposes of submitting plagiarized work (either paraphrasing or directly copying student work) is dishonest, and this sharing goes against the Alberta School Act’s expectation of students to respect school rules and co-operate with how schools offer education to their students.

ADLC prefers to take a progressive approach to the sharing of work with other students, in order to educate and correct the behaviour.

If a student is currently enrolled in any ADLC course and found to be sharing school work, whether from their current course or another, to others, the following will happen:

First Incidence	Second Incidence
The student is informed that their work has been submitted as plagiarized work by another student; a warning is provided that further submissions of such work, from any course, will be grounds for removal from the current course(s).	The student is removed from all active ADLC courses.

If the student is not currently enrolled in any ADLC course and found to be sharing school work with others, they are informed that their work has been submitted as plagiarized work by another student and, as such, further registrations in any ADLC course will not be permitted. The incident will be recorded on the student’s file.

Such actions do not limit ADLC to pursue other remedies (actions), either criminal or civil, for the distribution of its copyrighted materials.

Unit A: Geometry

For full marks, show all calculations, steps, and/or explain your answers. State all necessary formulas.

Total: 45 marks.

3

1. Match each polygon with its definition. Write the number that best matches the definition.

Definition	Polygon
_____ a. a closed, straight-sided shape with three or more line segments	1. regular polygon
_____ b. a closed-sided shape without vertices pointing inward	2. quadrilateral
_____ c. a closed, straight-sided shape with at least one vertex pointing inward	3. convex polygon
_____ d. a polygon with all sides equal and angles equal	4. irregular polygon
_____ e. a polygon with unequal sides, angles, or both	5. polygon
_____ f. a four-sided polygon	6. concave polygon

1

2. Explain why this polygon is not a regular polygon.

3. Remi is building a garden in the shape of an octagon.

1

- a. Find the sum of the interior angles of the octagon.

1

- b. Find the measure of one of the interior angles in the octagon.

4. Classify each triangle below according to both angle and side length. Each triangle must have two classifications.

Angle Classification

Side Length Classification

- A. right triangle
B. acute triangle
C. obtuse triangle

- D. equilateral triangle
E. isosceles triangle
F. scalene triangle

1

- a. _____

1

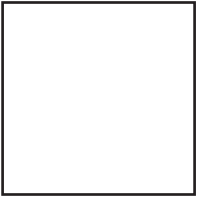

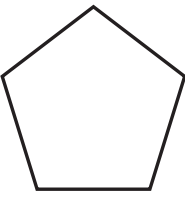

- b. _____

5. Match the shape to its definition.

Definition	Shape
_____ a. a quadrilateral with two pairs of equal adjacent sides	1. equilateral triangle
_____ b. a triangle where two sides are equal in length	2. isosceles triangle
_____ c. a quadrilateral with two sides equal in length at most and one pair of opposite sides that are parallel	3. kite
_____ d. a four-sided polygon	4. parallelogram
_____ e. a triangle where all three sides are equal in length	5. quadrilateral
_____ f. a quadrilateral with four equal sides	6. rectangle
_____ g. a quadrilateral with all four sides equal and all interior angles are 90°	7. rhombus
_____ h. a triangle where no sides are equal in length	8. scalene triangle
_____ i. a quadrilateral with opposite sides parallel and equal in length as well as interior angles equal to 90°	9. square
_____ j. a quadrilateral with two pairs of equal and parallel opposite sides	10. trapezoid

- 2 6. Draw all the diagonals in each of the following regular polygons. How many diagonals does each polygon have?

four sides	five sides
	
_____ diagonals	_____ diagonals

- 2 7. Determine the missing measurements for the quadrilateral below.

In square $VWXY$,

$VY = 6.7$ cm

$VX = 9.5$ cm

$\angle a =$ _____

$\angle b =$ _____

$VW =$ _____

$WY =$ _____

- 1 8. Ryan has built a window frame. He wants to check that the frame he built will fit a rectangular pane of glass. According to his measurements below, is Ryan's window frame a rectangle? Explain.

9. Parallelogram $ABCD$ and parallelogram $JKLM$ are similar. Find the value of p .

10. Translate point $A(-6, -4)$ horizontally 5 units to the right and vertically 7 units up. Label the transformed point A' . State the coordinates of A' .

The coordinates of A' are _____.

- 1 11. Translate $\triangle JKL$ horizontally 2 units to the left and vertically 4 units down. Label each new vertex using the correct notation.

- 1 12. Translate the V horizontally 13 units to the right and vertically 8 units down. Label the resulting image V' .

13. Which image is a translation of the original pentagon?

14. Complete the pattern in the diagram below by drawing the reflection of the shape using a vertical line of reflection.

- 2 15. Reflect quadrilateral $JKLM$ in the x -axis and then in the y -axis. Draw and label the two resulting images, quadrilaterals $J'K'L'M'$ and $J''K''L''M''$.

- 2 16. Rotate $\triangle DEF$ 180° clockwise about the origin. State the coordinates of the image, $\triangle D'E'F'$.

Coordinates: _____

17. Rotate quadrilateral $PQRS$ 270° counterclockwise about the origin. Draw and label the image, quadrilateral $P'Q'R'S'$.

18. Follow the steps below to transform $\triangle DEF$.

①

- a. Reflect $\triangle DEF$ in the y -axis to produce the reflected image, $\triangle D'E'F'$.
- Draw and label reflected image $D'E'F'$.

①

- b. Translate $\triangle D'E'F'$ horizontally 7 units to the right and 9 units up to produce the translated image, $\triangle D''E''F''$.
- Draw and label translated image $D''E''F''$.

19. Rotate quadrilateral $LMNO$ 90° counterclockwise about the origin.

1

- a. Draw and label the resulting image, quadrilateral $L'M'N'O'$.

1

- b. Reflect the image $L'M'N'O'$ in the x -axis. Label the resulting image $L''M''N''O''$.

20. Use the sine law to find the measure of $\angle A$ to the nearest degree.

21. Use the cosine law to determine the measure of $\angle B$ to the nearest degree.

22. State whether the sine law or the cosine law is the best choice to solve for $\angle E$ and side e , respectively. Explain. Do not solve.

23. Rajvir is golfing. The distance from the tee to the green on the seventh hole is 168 yards. His first shot was 128 yards but was 30° off a direct line to the hole. How far does Rajvir have to hit his next shot? Round the answer to 1 decimal place.

24. A hot air balloon is tethered to the ground by two ropes. The first rope makes an angle of 42° with the ground and is 22 metres long. The second rope makes an angle of 35° with the ground.

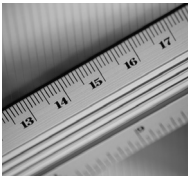

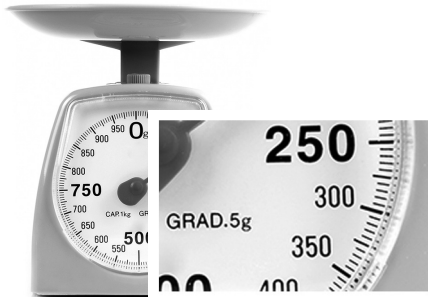

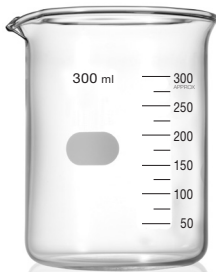

- 1 a. What is the angle between the two ropes, $\angle X$?
- 2 b. How far apart, in metres m , are the tethers on the ground? Round the answer to 1 decimal place.

Unit B: Measurement

Total: 15 marks.

25. Complete the following table. The first row as been completed as an example.

Tool	Smallest Increment on the Tool (include units)	Strength(s) of the Tool	Limitation(s) of the Tool
Name: desk ruler 	1 mm	compact and easy to use	not good for measuring very small or very large items
Name: _____ 			
Name: _____ 			
Name: _____ 			

- 1 _____ 26. a. Which of the following diagrams of a target represents a measuring tool that is precise but not accurate?

A.

B.

C.

D.

- 1 b. Explain why you chose the answer you did.

- 1 27. Usman needs to measure the width of the head of a nail. He is unsure if he should use a micrometer or a ruler. What measuring tool would you suggest Usman use? Explain.

28. For each of the following diagrams, state the precision and uncertainty shown. Express the readings as measurement \pm uncertainty.

a.

precision = _____

uncertainty = _____

speed = _____

b.

precision = _____

uncertainty = _____

weight = _____

- 1 29. The wall of a hydraulic cylinder is $7.62 \text{ mm} \pm 0.005 \text{ mm}$. What are the maximum and minimum measurements of the wall?

30. A seed producer is packaging kale seeds. The nominal value for the mass of a package of kale seeds is 0.50 grams with a tolerance of 0.02 grams. An employee checks the mass of six packages, and the mass(es) found are recorded in the table below.

Package Number	Mass (g)
1	0.50
2	0.48
3	0.46
4	0.52
5	0.53
6	0.49

- 1 a. Determine the maximum and minimum acceptable masses for the package of kale seeds?

- 1 b. Which package of seeds fall within the acceptable range?
