

## ***Papovavirus***

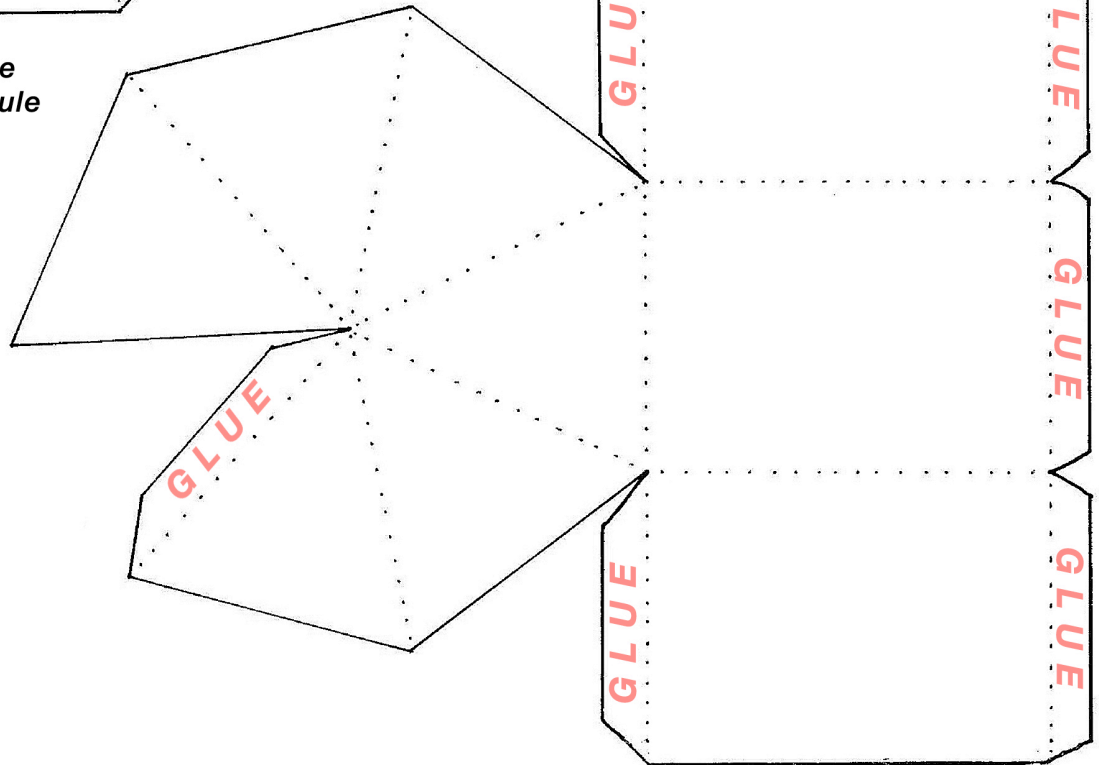

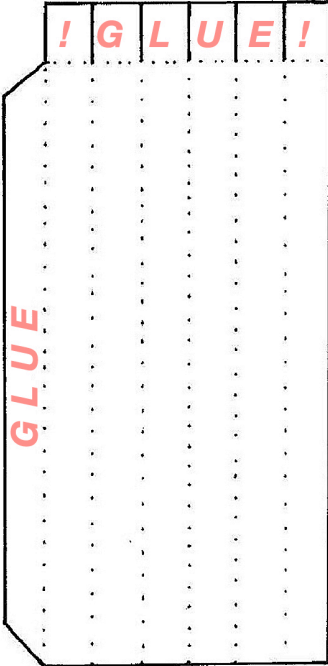

The most common *papovavirus* that infects people is Human papillomavirus, also known as HPV.

Carefully cut out this net. The red tabs will be used to glue or tape the faces of the shape together. Fold along the dotted interior lines to create a shape like the one here:

# Bacteriophage

Attach these tabs to the bottom of the head capsule

A bacteriophage is a virus that infects bacteria.

Carefully cut out this net. Each solid line requires a cut. The red tabs will be used to glue or tape the faces of the shape together. Fold along the dashed interior lines to create a bacteriophage model.
