
Flower

Is the reproductive part of the plant. Once pollinated it makes fruit and seeds.

The stem carries water and nutrients from the roots to the flowers and leaves. It also carries food from the leaves to the rest of the plant.

Stem

Leaves

The leaves take in sunlight and air (carbon dioxide), and make food (sugar) for the rest of the plant. The release air (in the form of oxygen).

Roots

The roots take in water and minerals from the soil. They also anchor the plant into the ground.
