How Do Flowering Plants Propagate?

Discover: How do Flowering Plants Propagate?

Question

How do flowering plants propagate?

What does **propagate** mean? When flowering plants reproduce, more plants are produced the same as their parent-plants. They *propagate*. We can help them reproduce by planting **seeds**, **cuttings**, **bulbs**, and **runners** - depending upon the type of plant.

Resources

Access the website links from the online course.

- How do Plants Reproduce? (website)
- ADLC Digital Lesson on Where Plants Come From

Instructions

- 1 Read ***How do Flowering Plants Propagate Chart*** located on the next page.
- 2 Watch **How do Plants Reproduce** and the ADLC Digital Lesson on **Where Plants Come From** videos. While watching the videos, summarize in point-form each of the processes that flowering plants can use to **propagate** in the ***How do Flowering Plants Propagate Chart***.
