

## Pre-Assessment Unit 1: Sky Science

What do I already know about objects in the day and night sky and how they can affect us?

**Complete the Frayer Model by answering these questions.**

How does our sky change throughout the day and night?	What is our solar system, and what objects are in our solar system?
<b>Sky Science</b>	
What is the universe, and what is in it?	How can you measure and observe things in the sky, solar system, and universe?

### Need a Hint?

- 
- Is the Sun in the same place in the sky all day? Does the moon look the same every night?
  - What planets are in our solar system? Do you know about other stars, moons, and objects “out there”?
  - What do you know about stars and constellations? How big is the universe?
  - What devices have been invented to see things in the sky?
