

## Move the Decimal Point

1. Convert 9 L to hectolitres, using the decimal point strategy.

*Step 1: Using the SI Prefix table, write the conversion ratio as an equality, and determine in which direction the decimal moves and how many places it moves.*

*Step 2: Repeat the same decimal movement (direction and number of places) on the measurement given.*

2. Use the decimal point strategy to convert 3752 dam to millimetres.
