

Area of Composite Figures

1. Determine the area of the composite figure shown.

Step 1: *Separate the figure into simple shapes.*

The figure can be split into a parallelogram and a triangle.

Step 2: Calculate the area of each shape, and then add the areas together.

$$\begin{aligned}A_{\text{parallelogram}} &= bh \\&= 18 \text{ cm} \times 10.5 \text{ cm} \\&= 189 \text{ cm}^2\end{aligned}$$

$$\begin{aligned}A_{\text{triangle}} &= \frac{bh}{2} \\&= \frac{7 \text{ cm} \times 6 \text{ cm}}{2} \\&= 21 \text{ cm}^2\end{aligned}$$

$$\begin{aligned}A_{\text{total}} &= A_{\text{parallelogram}} + A_{\text{triangle}} \\&= 189 \text{ cm}^2 + 21 \text{ cm}^2 \\&= 210 \text{ cm}^2\end{aligned}$$

The area of the composite figure is 210 cm².

2. Determine the area of the following shape.

Step 1: Separate the figure into simple shapes.

The figure can be split into a trapezoid and a semi-circle.

Step 2: Calculate the area of each shape, and then subtract the areas.

$$\begin{aligned} A_{\text{trapezoid}} &= \frac{(a + b)h}{2} \\ &= \frac{(16 \text{ cm} + 20 \text{ cm}) \times 14 \text{ cm}}{2} \\ &= 252 \text{ cm}^2 \end{aligned}$$

$$\begin{aligned} A_{\text{semi-circle}} &= \frac{\pi r^2}{2} \\ &= \frac{\pi (8 \text{ cm})^2}{2} \\ &= 100.5 \text{ cm}^2 \end{aligned}$$

$$\begin{aligned} A_{\text{total}} &= A_{\text{trapezoid}} - A_{\text{semi-circle}} \\ &= 252 \text{ cm}^2 - 100.5 \text{ cm}^2 \\ &= 151.5 \text{ cm}^2 \end{aligned}$$

The area of the composite figure is approximately 151.5 cm².
