

## Glossary

---

**Coincident Lines** Lines that lie on top of one another

**Elimination** A method for solving a system equations where two equations are added or subtracted to reduce the number of variables

**Mathematical Model** A mathematical representation of a problem that makes the problem easier to solve

**Substitution** A method for solving a system equations where a variable's equivalent expression is substituted for that variable in another equation to reduce the number of variables

**System of Equations** A collection of equations that involve the same variables
